

Qua tab PX

Qua tab PX Specifications & Services

Brand name	au Brand Model
-------------------	-----------------------

Basic Specifications

Size	Approx. 124 x 211 x 7.8mm
Weight	Approx. 310g
Continuous Call Time (Voice Call Time / When used within Japan) *1	-
Continuous Standby Time (When used within Japan) *1	4G LTE area : Approx. 800 hours WiMAX 2+ : Approx. 800 hours
Charge Time	Approx. 150 minutes [!]
Battery Capacity	4,800mAh
Battery removal	-
External memory (Maximum storage capacity of compatible cards) *2	200GB microSDXC™
Internal Memory Capacity (RAM) *3	2GB
Internal Memory Capacity (ROM) *3	16GB
Number of Addresses Registered in Address Book	Varies depending on free space in handset memory
Display Type	IPS
Display Size	Approx. 8.0 inches

Qua tab PX

Waterproof *4	IPX5 / IPX7 [2]
Dustproof *4	IP6X [3]
au IC Card	au Nano IC Card 04 LE
OS *5	Android™ 7.0 [4]
CPU	MSM8952 1.5GHz Quad-core + 1.2GHz Quad-core

- *1 The continuous call time and continuous standby time listed are average time lengths for usage from combined moving and fixed locations with normal signal reception. The actual times for which the phone can be used will vary widely depending on a variety of conditions, including calling time, number of calls, email composing time, number of sent and received emails, usage conditions of Internet and applications, and network conditions. (More frequent usage or poor signal reception shortens these times. Less frequent usage extends the times.)
- *2 This figure has been confirmed through the operation test following KDDI's standard. With some models, copyrighted data that can be stored in external storage is transferable to secured external memories. However, note that the availability varies depending on the manufacturers: some microSD™ cards, microSDHC™ cards and microSDXC™ cards even with the above-mentioned specifications may be unsupported.
- *3 The entire memory capacity cannot be used to save apps and data.
- *4 Be sure the caps are securely fastened and the battery cover on devices with a removable battery cover is firmly in place. Do not immerse the unit in ocean, pool, or hot water. Do not place the unit on the sand.
- *5 Information at the time of release. Click here for the latest update information.
[Products update information \(in Japanese only\)](#)

- [1] Measured with the common AC adapter 05
- [2] IPX5 rating: The unit will retain its functionality as a phone even if blasted with water projected at all angles through 6.3 mm nozzles at a flow rate of approximately 12.5 liters per minute for more than 3 minutes from a distance of approximately 3 meters. IPX7 rating: Water will not leak inside and the unit will retain its functionality as a phone even if it is gently immersed in a tank of still tap water at room temperature at a depth of 1 meters and placed on the bottom for approximately 30 minutes.
- [3] IP6X rating: The unit is protected to a point where test dust (a diameter of 75 μm or less) will not enter the unit even if the unit is churned for 8 hours inside a dust resistance testing tube.
- [4] An OS update may be required. Check here for how to perform an update and other details.

Communications

au VoLTE	-
Carrier Aggregation	-
Communication standard	4G LTE / WiMAX 2+
Maximum communication speed	150 / 25 [5]

Qua tab PX

Wi-Fi	IEEE802.11/a/b/g/n/ac
Miracast	YES
Bluetooth®	Ver.4.2
Infrared Communications	-

*6 Maximum transmission speed differs depending on the service area and communication standards. For details, please see the service area map.
[Service area \(in Japanese only\)](#)

[5] 150 Mbps is not available in some areas. For details, check the service areas.
[150 Mbps service areas \(in Japanese only\)](#)

* 4G LTE and WiMAX 2+ connect to the network that KDDI deems has the least amount of traffic, in accordance to traffic and other conditions. "4G" appears on the screen display of the smartphone or tablet.

* Each of the above communication speeds is a best-effort service. Note that the maximum communication speed is not the actual communication speed, but the maximum value based on the technical standards. The actual speed may fall substantially short of the maximum for various reasons including customer's communication environment and traffic conditions.

Camera

Main camera effective pixels	Approx. 5.00 million pixels
Sub camera effective pixels	Approx. 5.00 million pixels
Imaging element	Main : CMOS Sub : CMOS
Shooting light	Still image : - Movie : -
Auto-focus Shooting	Still image : YES Movie : YES
Camera shake correction function & Camera shake reduction function	Still image : - Movie : -
Macro Function	-

Qua tab PX

Zoom Function - Still image	4x
Zoom Function - Movie	4x
